## Laminar Flow Differential Pressure Mass Flow Controller

### (Industrial Use)

The AFC/AFM series measures the differential pressure of the gas generated which occurs when a small laminar flow element to measure the pressure difference, and the miniaturization was achieved by adopting the small laminar flow element.

By the appropriate selection of the flow rate, it is possible to correspond from minute flow to high flow rate.

### Feature

- It is possible to measure it from the amount of minute to high flow.
- It is possible to correspond from 10NCCM to 50 NLM according to the selection of the element.
- It is a flow rate measurement and control unit covering variety type of flow rates. It is strong in a temporary influx of moisture into the gas and the condensation of the gas.

Patent Pending
